The image shows the exterior of a building with a mix of colors and architectural details. A large section of the wall is painted a vibrant blue, featuring a window with white trim and a black door to the right. To the left, a portion of the building is painted pink. The facade is adorned with white decorative moldings, including a prominent archway and ornate brackets. A black wrought-iron fence with decorative finials runs across the foreground. The overall scene is bright and colorful, showcasing a variety of exterior paint finishes and architectural elements.

PERMOLIT PERMOMAX EXTERIOR PRIMER

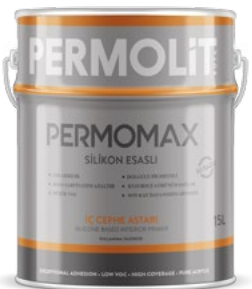

It can be applied on any exterior structural elements which are prepared for priming.

- It penetrates the surfaces deeply and creates solid surfaces onto which the paint can hold on.
- It is filled and saturates the raw surfaces and reduces the final coat paint consumption.
- It reduces top-coat paint consumption by saturating the raw surfaces as it is reinforced.
- It eliminates colour ripples which are likely to occur in top-coat paint on the surfaces with a different absorbing capacity.
- It prevents different textures formed on repaired surfaces.
